EDUCATION

The Pennsylvania State University <i>Master of Science in Artificial Intelligence (World Campus)</i>	University Park, PA May 2026 – Present
The Pennsylvania State University <i>Bachelor of Science in Computer Science, College of Engineering</i>	University Park, PA Graduated May 2025

EXPERIENCE

AI Engineer <i>Radians Per Second Squared</i>	March 2026 – Present State College, PA
• Surfaced \$2,500K in revenue and a 58-hour-overdue engine service hidden in operational data • Eliminated \$20K+/month in lost billing by moving clients from paper to an automated system of records • Reclaimed 20–30 hrs/week by consolidating 3+ client engagements into a git-native web app (Python, HTMX) • Mapped 335 client services across equipment rentals, work orders, and delivery tickets into an AI-powered platform • Authored internal agentic coding skills and MCP servers, cutting 5–10 hrs/week of QA and UX work	
AI Application Specialist <i>Penn State Nittany AI Alliance</i>	June 2025 – 2026 University Park, PA
• Launched a full-stack AI platform (BAML) that coached 150+ students through the \$20K Nittany AI Challenge • Automated 90% of new-student onboarding with a 3-step computer-vision pipeline (Grounding DINO, CLIP, SAM) • Compressed code-review time 75% with an AI workflow triaging 100+ student codebases to 40 for review • Saved managers 80% of data-pull time by launching 3 dashboards on Power Automate, Power BI, and custom APIs • Reduced deployment setup from 2 hrs to ~20 min with a standardized multi-cloud provisioning pipeline • Hardened 5+ codebases/semester via pen-testing, prompt-injection, secrets scanning, and RBAC reviews • Directed weekly engagements for 10+ clients including Lockheed Martin, John Deere, and Penn State OPP • Taught 50–60 students monthly in workshops on MLOps, GitOps, and model fine-tuning	
Undergraduate Research Assistant <i>The Human in Computing and Cognition Research Lab</i>	May 2023 – 2025 University Park, PA
• Designed 3 Minecraft Malmo environments (Python, Java, XML) for controlled human-AI interaction studies • Conducted 25+ studies modeling cognitive biases in human-AI interaction with the ACT-R architecture • Fine-tuned LLM chatbots for engineering competitions with RAG and LoRA adaptation • Developed 3 data-processing and visualization pipelines in Python to accelerate analysis and model evaluation • Co-authored a peer-reviewed paper on AI ethics and chatbot development, published by the ASEE	

PROJECTS

Rad Agent <i>TypeScript, BAML, AWS EKS</i>	2026 – Present
• Cut feedback-to-code cycle time 75% by auto-routing email feedback into GitHub issues and code PRs • Created a multi-agent orchestration harness (TypeScript, inference API, BAML) on AWS EKS	
Fantasy Football Prediction AI Web-App <i>Python, XGBoost, GCP, PostgreSQL</i>	Oct 2025 – Present
• Trained 4 position-specific XGBoost models (lag features, walk-forward CV) to project NFL performance • Outperformed ESPN's player projections ~70% of the time, landing closer to actual fantasy points	

TECHNICAL SKILLS

Languages: JavaScript, Python, C, C++, MATLAB, SQL, HTML5, CSS, Assembly, Verilog
Frameworks: React, Node.js, Next.js, Flask, Bootstrap, Tailwind, shadcn/ui
Developer Tools: FastAPI, VS Code, Git, GitHub, Power Automate, n8n, Docker, Jupyter, Azure, GCP, AWS, PostgreSQL, MongoDB
Other: Microsoft Teams, SharePoint, video editing, writing, public speaking
